MULTISIMS.USA

Admin guide

How to run the website, the team and your dealers from the admin portal. Keep it next to you for the first few weeks.

MultiSims USA · Version 1 · October 2026

What is in this guide

1. Signing in and finding your way
2. Your day at a glance
3. Carriers and plans
4. Prices, sales and discount codes
5. International calling
6. Orders
7. Tickets and replacements
8. Agents
9. Dealers and their balance
10. Reviews
11. Reports
12. Settings
13. Good to know

1 Signing in and finding your way

Go to **multisimsusa.com/portal/login** and sign in with your email and password. You land on the Overview. Agents and dealers use the same sign in page and each of them only sees their own portal.

The menu on the left is grouped the way you work:

GROUP	WHAT IS THERE
Top	Overview and Reports
Orders	Orders, Agent queue, Tickets, Activations, Customers, Reviews
Catalogue	Carriers, Plans, Add-ons, Discounts
Team	Agents, Dealers, Settings

The bar at the top shows the bell (your notifications), a sound switch for new order alerts, a link to the website and the light or dark theme. Your name at the bottom of the menu opens your account and Sign out.

Everything works on a phone. On a small screen the menu opens from the button at the top left.

2 Your day at a glance

Overview

The tiles at the top show sales, orders paid, SIMs delivered, orders waiting right now and dealer funds that came in. Under each figure you see how it compares with the period before. Change the period with the box above the tiles (today, 7 days, 30 days, this month or your own dates).

Needs attention appears only when something needs you, for example an order an agent flagged or a replacement waiting for your approval. Click it and deal with it first.

Notifications

The bell shows new orders, flagged orders, customer messages, new tickets and dealer top ups as they happen. A number on the bell means unread items. Click one to open it, or use Mark all as read.

Emails

You also get an email when an order sits unclaimed for too long, when a customer sends a message and when a ticket comes in. The address and the waiting time are set in **Settings**.

3 Carriers and plans

Carriers

In **Carriers** you add a network with its name and logo, and switch **On website** on or off. Hiding a carrier hides all of its plans at once, which is handy when a network has a problem. Carriers show on the home page in the order of this list.

Adding a plan

1. Open **Plans** and click New plan.
2. Pick the carrier and the product: eSIM or SIM card.
3. Fill in the plan details: name, a short summary, data allowance, hotspot, talk, text, network and speed, any slowdown after a data limit and the countries covered. Leave a field empty if it does not apply.
4. Save. The plan is created as a draft, so nobody sees it yet.
5. Add the day packages (see the next part). **Quick fill days** adds the usual lengths in one click.
6. Switch **Published** on and save.

> **When is a plan on the website?** Only when three things are true: the plan is published, its carrier is on the website, and at least one day package is on sale. The plan page tells you which one is missing.

Day packages

Each plan is sold in lengths of days, and each length has its own price. A package row has:

FIELD	MEANING
Length	Number of days, any number you like
Price	The normal price on the website
Sale	Optional. A lower price for a promotion. Leave empty for no sale
Wholesale	What dealers pay. Leave empty and dealers will not see this length
On sale	Switch off to stop selling one length without deleting it

Price changes show on the website within a few seconds.

Pausing or removing a plan

To stop selling a plan for a while, switch **Published** off and save. It keeps everything and you can put it back any time. **Delete plan** removes it for good and its page stops working, so only use it for plans you will never sell again.

4 Prices, sales and discount codes

Sale prices

Put a price in the Sale field of a package. The website then shows the sale price with the normal price crossed out and a Sale label. Clear the field to end the sale.

> **Please note.** Only show a crossed out price that you really charged before. US rules do not allow made up "was" prices.

Discount codes

In **Discounts** click New discount code and set:

- the code customers type, for example SUMMER10
- a percentage or a fixed amount off
- optionally one carrier only, start and end dates, and how many times it can be used

Customers enter it at checkout under "Have a discount code?". Codes work on website orders only. They never reduce shipping or the network fee, and the minimum order is checked after the discount. A use is only counted when the order is paid. Switch a code off at any time to stop it.

5 International calling

In **Add-ons** you set the price of international calling (website and wholesale) and whether it is offered. Customers switch it on when they pick their days.

The list of countries and their minute caps comes from the carrier's rate table. Customers see it under "See where you can call" on the plan page and at checkout. When the carrier sends a new table, use **Replace list** on the same page.

6 Orders

Agents fill orders from the agent queue. As the owner you mostly watch, and step in when something goes wrong.

What the statuses mean

STATUS	MEANING
Awaiting payment	Customer started checkout but has not paid yet
In queue	Paid and waiting for an agent
Claimed	An agent is working on it
Needs attention	An agent flagged it for you
Shipped	A SIM card was posted, with a tracking number
Delivered	The eSIM or the SIM details were sent to the customer
Cancelled	Stopped, nothing more happens

Customers and dealers only ever see Processing, Shipped, Delivered or Cancelled.

What you can do on an order

Open any order from **Orders**. Depending on its status you can:

- **Reassign** it to another agent, or put it back in the queue
- Fill it yourself, the same way an agent does
- **Send back with an instruction** when an agent flagged it, for example "Deliver the nearest available area code"
- **Mark as paid** if a payment arrived but the order did not update
- **Cancel order**, with a short reason only you see
- **Record a refund**, with the details of the crypto you sent back

Use the search and filters at the top of the list to find an order by number, name, email or phone.

Activations and customers

Activations lists every SIM that was delivered or shipped. Search it by phone number, ICCID, order number or email. **Customers** lists everyone who ordered on the website and can be downloaded as a file for your records.

7 Tickets and replacements

Customers report a problem from their order page. Dealers do the same from their portal. Each report becomes a ticket in **Tickets**, the most urgent first.

Open a ticket, write one clear answer and set its status. The customer sees the answer on their order page and gets it by email.

If a SIM has to be replaced, use **Issue replacement**. It creates a free new order that goes to the queue. If you switched on "Replacements wait for my approval" in Settings, replacements raised by agents wait for you first.

You choose which problem types customers can pick (for example No signal) in **Settings**.

8 Agents

- **New agent:** in **Agents**, enter their name, email and a password, then share the login with them.
- **Reset password:** set a new one from the agent's row.
- **Switch off a login** when someone leaves. They can no longer sign in, and any orders they had claimed go back to the queue.

Every active agent gets the new order and ticket emails.

9 Dealers and their balance

Dealers buy in bulk from their own portal. They pay from a balance held with you, never at checkout.

Setting up a dealer

1. In **Dealers** click New dealer. Enter the company, the contact's name, email and a password, then share the login.
2. Open the dealer. Under the prices grid, set any prices that differ from your normal wholesale prices. Leave a box empty to use the normal one. Click Save prices.
3. Set the **Dealer SIM card price** if this dealer pays a different amount per physical SIM card.
4. Set **Credit allowed**. This is how far below zero they may order. 0 means they pay first.
5. Add funds so they can start ordering.

Adding money

There are two ways money comes in:

- **They top up in crypto** from their Wallet page. The money is added by itself once the payment is complete. If they pay less than the invoice, nothing is added and you get an email, so you can add the right amount by hand.
- **You add funds by hand**, for example after a bank transfer or a payment on WhatsApp. On the dealer page use **Add funds**, enter the amount and a note such as "Paid on WhatsApp for 100 activations".

To fix a mistake use **Correction**, choose Add to balance or Take from balance and say what was wrong. The dealer sees the note next to the amount. Nothing in the wallet history can be edited or deleted, so every change stays on record.

How their balance moves

When a dealer places an order, the full amount is held. Each SIM is only charged when it is delivered. If you cancel an order, whatever was not delivered goes back to their balance. A refund on a dealer order is paid back into their balance.

Suspending a dealer

Switch the dealer to **Suspended** to stop new orders and sign ins. Orders already in progress are still filled.

10 Reviews

When an order is delivered, the customer can rate it from their order page or from the delivery email. All ratings arrive in **Reviews**.

Nothing shows on the website until you switch **Featured** on for a review. Featured reviews appear on the home page with the customer's first name, stars and comment. The site never shows an average or a count. Use **Hide** for reviews you do not want to keep in the list.

11 Reports

Reports shows sales, deliveries, tickets and replacements for any dates. Narrow it by carrier, dealer, agent or channel (website or dealer). Each table has a total row and a **CSV** button that downloads it for Excel or Google Sheets.

12 Settings

SETTING	WHAT IT DOES
Your alert email	Where unclaimed order alerts, customer messages and new tickets go
Unclaimed alert after	Minutes an order can wait before you get an email
Minimum order	Smallest website order allowed
Shipping fee	Charged once on an order with SIM cards, however many. eSIMs never pay shipping
Network fee	Charged once on every website order to cover the crypto network cost
Dealer SIM card price	Default price per physical SIM card for dealers
Replacement approval	When on, replacements raised by agents wait for you
Replacements per order	The most free replacements one order can get
Issue types	The problems customers can choose when they report one

13 Good to know

- Changes to carriers, plans and prices show on the website straight away. There is nothing to publish separately.
- The website never says a person fills the orders. Customers see Processing, Shipped and Delivered.
- Payments are in crypto through NOWPayments. An order only moves to the queue once the payment is confirmed.
- Customers do not need an account. Each order has its own private link, sent by email, where they see their eSIM, tracking and messages.
- If something looks wrong, take a screenshot and send it to us on WhatsApp with the order number.
